

SHAIKH ZEESHAN MURSHED

Senior Front-end React Developer | TypeScript | Full-Stack

Montréal, QC, Canada | Open to Remote | sk.zeeshan1992@gmail.com | linkedin.com/in/skizsk | github.com/sk-izsk | izsk.netlify.app

Languages: English, Bengali, Hindi

PROFESSIONAL SUMMARY

Senior Front-end React Developer with 7+ years building high-performance, accessible web interfaces for enterprise SaaS platforms. Deep expertise in React, TypeScript, and component architecture — from designing reusable UI libraries consumed across multiple teams to translating complex UX/UI mockups into maintainable, production-grade interfaces. Consistent track record of optimizing front-end performance, instrumenting analytics across user journeys, and integrating cleanly with REST APIs and backend teams. Comfortable owning technical decisions end-to-end, contributing to agile ceremonies, and raising the quality bar through code review, documentation, and mentoring. Currently expanding into data visualization tooling to support analytics-facing interfaces.

TECHNICAL SKILLS

Languages: JavaScript (ES2022+), TypeScript, HTML5, CSS3

Frameworks: React, Next.js, Node.js, Express, GraphQL, React Native (Expo)

State / Data: TanStack Query (React Query), Redux Toolkit, Zustand

UI Libraries: Material-UI (MUI), Ant Design, Tailwind CSS, Shadcn, Styled-Components, Bootstrap, JSS

Testing: Jest, Vitest, Cypress (E2E), React Testing Library, Enzyme, Mocha, Chai, Nock

Tools / DevOps: Git, GitLab CI/CD, Docker, Webpack, Vite, Storybook, Postman, Figma, Jira, Notion

Analytics / Monitoring: Frontend event tracking, user funnel instrumentation, error monitoring (Sentry), performance metrics (Core Web Vitals)

Databases: PostgreSQL, MongoDB, Drizzle ORM

Auth / Cloud: Clerk, JWT, AWS (S3, Lambda), Cloudinary, Heroku, Netlify

AI & Agentic Tooling: Prompt engineering, LLM integration, MCP, custom MCP servers, Storybook MCP, Figma MCP, GitHub MCP, AI code review, agentic workflow automation

EXPERIENCE

Software Engineer

Nov 2020 – Present

SwiftConnect — Montréal, QC

Front-end lead on enterprise access & security management SaaS platform

- Designed and evolved high-performance web interfaces using React, TypeScript, Styled-Components, Ant Design, Redux Toolkit, and TanStack Query, covering complex authorization workflows across multiple product areas.
- Translated UX/UI mockups into reusable, accessible component systems (WCAG standards) across 10+ UI components, cutting design-to-dev revision cycles by ~30%.
- Authored and maintained a private, Storybook-documented NPM component library adopted across cross-functional teams, reducing duplicate front-end code by ~40% and enforcing consistent UI standards at scale.
- Instrumented front-end analytics and KPI tracking across key user journeys, giving product teams real-time visibility into feature adoption, funnel drop-off, and performance metrics.
- Optimized front-end performance and code quality through GitLab CI/CD pipeline setup, error monitoring (Sentry), Core Web Vitals tracking, and consistent test coverage via Jest and React Testing Library.
- Mentored 2–3 junior developers through code reviews, pair programming, and bi-weekly knowledge-sharing sessions, reducing review turnaround time by ~25%.
- Acted as technical lead and proxy Product Owner during critical delivery phases, translating business requirements into architecture plans and coordinating sprint execution across front-end and backend teams.
- Built a Storybook + Figma MCP pipeline for commit-time design-integrity validation, and engineered custom MCP servers enabling in-editor API doc queries, reducing cross-functional revision cycles by ~35%.
- Integrated AI tooling into engineering workflows: LLM-assisted PR reviews via GitHub MCP, agentic scaffolding for boilerplate and test generation, all with human-review gates.

Full Stack Developer

Oct 2020 – Nov 2020

Hatchways — Remote

Agile team of 4, full-stack web application development

- Built web applications using React and Material-UI on the front end and Express, Node.js, MongoDB, Cloudinary, and JWT authentication on the backend.
- Delivered full-stack features in 2-week sprint cycles within a cross-functional Agile team of 4.

Junior Software Developer

July 2019 – June 2020

Guiker Inc. — Montréal, QC

Mobile-first apartment rental marketplace startup

- Contributed to a full React rewrite of the main web product using TypeScript, Material-UI, RESTful APIs, and JSS with comprehensive Jest test coverage.
- Integrated REST API endpoints and owned specific Node.js/Express routing and middleware logic, directly reducing front-end-to-backend integration issues.
- Implemented in-app landlord-tenant chat and lease-signing flows, contributing to a 15–20% increase in repeat session activity.
- Developed mobile application features for iOS and Android using React Native (Expo), TypeScript, and Jest unit testing.

PROJECTS

SwiftConnect | *Enterprise Access & Security Management Platform*

- **Core Web Client:** Designed the primary access control interface in React/TypeScript. Built global state and caching layers (Redux Toolkit, TanStack Query) to manage complex authorization data, keep the UI stable during heavy mutations, and surface real-time analytics on feature adoption and conversion funnels.
- **Design System:** Authored a private, strongly-typed NPM component library enforced across cross-functional teams, reducing duplicate front-end code by ~40% and maintaining consistent UI standards across the platform.
- **Front-end Quality & Observability:** Established CI/CD pipelines, error monitoring (Sentry), and performance tracking (Core Web Vitals) across all front-end surfaces, giving engineering and product teams a shared view of interface health.
- **AI-Powered Developer Experience:** Built custom MCP servers (Storybook, Figma, GitHub) to automate design validation, streamline PR workflows, and eliminate developer context-switching.

Guiker | *Rental Marketplace — Apartment Search, Lease Signing & Chat*

- **Core Web Re-Architecture:** Full rewrite of the legacy web platform into a strongly-typed React SPA with modular, reusable UI components using Material-UI and JSS.
- **REST API Integration:** Owned the Node.js/Express layer with custom endpoints, middleware validation, and controller logic, reducing front-end-to-backend integration bottlenecks.

ZTable | *Interactive Chemistry App* | zsk-periodic.vercel.app | github.com/sk-izsk/zsk-periodic

- Designed a performance-focused render pipeline: equation balancing runs off the main thread in a Web Worker using nullspace-based fraction math, route screens lazy-load through TanStack Router, and 118 periodic table cells use memoized Zustand selectors to prevent broad re-renders on interaction.
- Built with React 19, TypeScript, Vite, and Bun across 8 features including 3D atom visualization (Three.js / React Three Fiber), molar mass parsing, solubility lookup, PDF worksheet export (jspdf), and i18n – with a typed JSON data pipeline, codegen scripts, and full Vitest + oxlint + typecheck coverage enforced in the build path.

Productify | *Personal Project* | izsk.netlify.app | github.com/sk-izsk

- Built a full-stack React 19 and Node.js application using Vite, React Router 7, and compound component pattern for a scalable, maintainable UI.
- Architected a strongly-typed REST API using Express 5, Drizzle ORM, and PostgreSQL (Neon) for relational product and comment data.
- Integrated TanStack Query for cache-aware mutations and Clerk SDK for end-to-end authentication with route protection and role-based authorization.

EDUCATION

Concordia University

M.Eng., Electrical & Computer Engineering

Montréal, QC

Sept 2016 – Dec 2018

- Relevant coursework: Computer Architecture Design, Microprocessor Applications, Digital Signal Processing, Model-Driven Software Engineering, Formal Hardware Verification, Real-Time Applications, Robotics.

DecodeMTL

Full-Stack Web Development Bootcamp

Montréal, QC

April 2019 – May 2019

- Intensive full-stack web development program. Technologies: JavaScript, React, Node.js, Express, MongoDB, HTML5, CSS3.
